

## RAM Construction Services

Celebrating 105 years in 2023

In 1973, Robert A. Mazur, a registered architect, husband, and father of four, purchased 50 percent of the Detroit division of Western Waterproofing, a company established in 1918.

Robert passed away suddenly in 1977, and his wife Evelyn stepped in to lead the family business. In 1980, their eldest son, Bob, joined the family business full-time at age 21. Soon after, the remaining 50 percent was purchased by the family. The company paid homage to the company's founder, Robert A. Mazur, in 2008 by officially rebranding Western Waterproofing as RAM Construction Services.

The company had 17 employees when Bob was named president of the firm in 1983. Under Bob's leadership, the company now employs more than 650 people and operates five offices in two states. RAM Construction Services is the largest Midwestern contractor specializing in the restoration of aging structures and skilled waterproofing. The company, headquartered in Livonia, completes more than 2,500 projects annually across the Midwest. RAM has played a large role in transforming the skyline of Detroit, helping to revitalize these iconic Detroit buildings – and literal “pillars” of the community – to their original stature.

Built on integrity, RAM Construction provides quality work and maintains a safe work environment. The company's quest for continuous improvement, along with diversifying the product line, has helped RAM successfully navigate the many economic downturns over the last 40 years (could we just say “over the years” because I don't know if you are dating the company to 1918, 1973 (50 years) or 1980 (forty-ish years). With forward thinking, RAM Construction Services will continue to drive endless possibilities and evolve within the industry.

# 105 Years
